Linde MH Expands Warehouse Product-line with the New MT15B and MT22

SUMMERVILLE, SC – Linde Material Handling, a member of KION North America, has expanded their warehouse product portfolio bringing two innovative pallet trucks to North America: the **Linde MT15B and MT22**. Both trucks embrace the values of versatility, efficiency, and performance which are the basis for Linde product design.

The **MT15B** is a 3,300 lb. capacity pallet truck powered by a 20Ah Li-ION battery. The onboard charger allows for easy opportunity charging – plugging in the truck on breaks and downtime throughout the shift – which greatly extends the life of the charge. As an option, you can replace the onboard charger for a second Li-ION battery. Both batteries are fully removable to be charged externally, increasing the operating time even further with battery hot swapping.

The **MT22** is a 4,500 lb. capacity pallet truck developed around a powerful 24v/100Ah Li-ION battery. Equipped standard with an onboard charger, short chassis length for small turning radius, and durable caster wheels, the MT22 powerhouse is built to operate in variable working conditions. This pallet truck also includes the signature Linde tiller head with ergonomic control placements to reduce operator movements.

These additions signify the commitment to innovation and continuous improvement held by KION North America. “With their cutting-edge lithium-ion technology and exceptional value, these pedestrian walkie pallet jacks will empower businesses to optimize efficiency and productivity in their operations,” shares Jena-Christine Lawrence, Director of Product Management, Strategy & Training at KION NA. “We are being very deliberate to keep evolving customer needs at the top of our minds. You can see this with the standard features available on the new MT15B and MT22.”
